EDUCATION

Anjuman Institute of Technology and Management

Bachelor of Engineering in Computer Science & Engineering ; **CGPA: 7.7**

Bhatkal, Karnataka, India

Sep 2023 – Jun 2027 (expected)

Anjuman Pre-University College

Pre-University Education (PCMC); **77%**

Bhatkal, Karnataka, India

2023

Green Valley International School

Secondary School Education; **89.4%**

Shiroor, Karnataka, India

2021

SKILLS

Languages: C/C++, C#, Java, Python, JavaScript, TypeScript, SQL

Technologies: Flask, Django, Node.js, React.js, MySQL, MongoDB, Git, Docker, AWS, Kubernetes, GCP, Kafka, PyTorch

Methodologies: Agile, Scrum, OOP, Functional Programming, DevOps, CI/CD, TDD

PROJECTS

CampusCast — College Digital Signage Platform | [Link](#)

Tech Stack: React.js, Node.js, Express.js, MongoDB, WebSockets, React Native

- Developed a wireless digital signage platform supporting real-time streaming across 10+ campus displays, improving information reach and visibility.
- Built a responsive web dashboard and React Native mobile app, enabling 100+ content updates per day with streamlined scheduling and publishing.
- Implemented WebSocket-based communication achieving <1 second latency for synchronized content updates across all connected screens.
- Designed and deployed role-based access control (RBAC) with MongoDB, managing 50+ users and 500+ content assets securely and efficiently.

Chess Bot | [GitHub](#)

Tech Stack: React.js, Vite, JavaScript, CSS

- Built a chess web app using React, Vite, JavaScript, and CSS
- Developed a custom chess engine (0 external libraries) with 100% legal move validation (check, checkmate, stalemate)
- Implemented 3-level AI using Minimax with Alpha-Beta pruning (depth up to 3)
- Added support for all special moves (castling, en passant, pawn promotion)
- Designed undo system and move history tracking using algebraic notation

Diet Planner | [GitHub](#)

Tech Stack: TypeScript, React.js, Vite, Recharts, date-fns, CSS

- Developed a browser-based diet tracking application with no backend, using localStorage for 100% client-side data persistence
- Implemented nutrient tracking for 4+ macronutrients and multiple micronutrients, enabling detailed daily intake analysis
- Built a BMR/TDEE calculator using the Mifflin-St Jeor equation to generate personalized calorie targets
- Integrated a food database of 35+ items with complete nutritional profiles for accurate tracking
- Designed interactive analytics dashboards using Recharts, improving user insight with real-time charts and progress visualization
- Developed a rule-based diet recommendation system suggesting foods based on nutrient deficiencies
